INDUSTRIE 4.0 – FEATURES

The amount of time companies need to invest in understanding Industrie 4.0 and launching promising implementation projects is a deterrent and is reduced to just one day here. After attending this workshop companies will be able to develop a rollout strategy for their organization and make an immediate start on projects that have a high probability of success. In addition, they will also know which associations and institutions actively support companies in the various areas.

STANDARDIZATION APPROACHES

Joint coordination of projects/problems via the test center in order to identify specific standardization approaches.
